

# Presentations in Workshops

---

During the past month, Tokunaga-Lab. members gave many presentations at international and domestic conferences.

At the Asia-Pacific Conference on Condensed Matter Physics 2022, Prof. Tokunaga gave an invited talk on field-induced insulating states in BiSb alloys. At the subsequent High Magnetic Field Science Conference, Dr. Kinoshita gave an invited talk on the development of imaging techniques under magnetic fields. Many other group members gave oral or poster presentations, as well.

Dr. Miyake also gave two invited talks about the field effect on  $\text{UTe}_2$  and quasicrystal approximants at the Muroran Institute of Technology Rare Earth Workshop 2022 (REWS2022) and GIMRT, REIMEI and IRN Aperiodic joint international workshop “Superconductivity, Structural Complexity and Topology of  $\text{UTe}_2$  and Aperiodic Crystals”.
