

Dr. Yuto Ishii's recent results have been accepted for publication in a scientific journal

On April 27, 2023 (Thursday), Dr. Yuto Ishii's research results on the magnetic field-induced phase transition of bismuth-based Mn oxides were accepted for publication in the Journal of the Physical Society of Japan. Interesting experimental results probably related to metastable states are presented. It may develop to study the phase-transition dynamics between inhomogeneous and homogeneous systems.

Dr. Yuto Ishii
(Research Associate)
