

EMFC experiment up to 640 T ! FBG measurement with Dr. Zahir from APS

The magnetoresistance measurement up to 640 T was performed using electro-magnetic flux compression system !
The B_{\max} is 640 T (300 T higher than that in last month),
and the result was good !

Dr. Zahir visited from Advanced Photon Source (APS) in USA.
We measured the magnetostriction using the Fiber Bragg Grating (FBG).
