

# Research Associate Miyake is moving out.

---

Research associate Atsushi Miyake in Tokunaga Laboratory will join Prof. Dai Aoki Laboratory, Institute for Materials Research, Tohoku University, as an Associate Professor from April 2023. Below is a message from Miyake.

Ten years of my term in IMGSL since April 2013 have passed in a blink of an eye. I am very grateful for many supports from Prof. Tokunaga and his group members, IMGSL, ISSP, my collaborators, and my family who lives far away from me, making my time here invaluable. The Aoki laboratory is Japan's only university joint-research center that can handle macroscopic amounts of actinide elements. With my accumulated knowledge experienced so far, I will continue condensed matter physics under multiple extreme conditions, focusing on uranium compounds. I want to contribute to developing high-magnetic-field science and condensed matter physics through joint-research programs of the IMGSL.

I thank your continued support.

Miyake (三宅) keeps his bottle of shochu at a bar in his new living place Mito (水戸) city.
